

MODULAR SENSOR BOX SBM

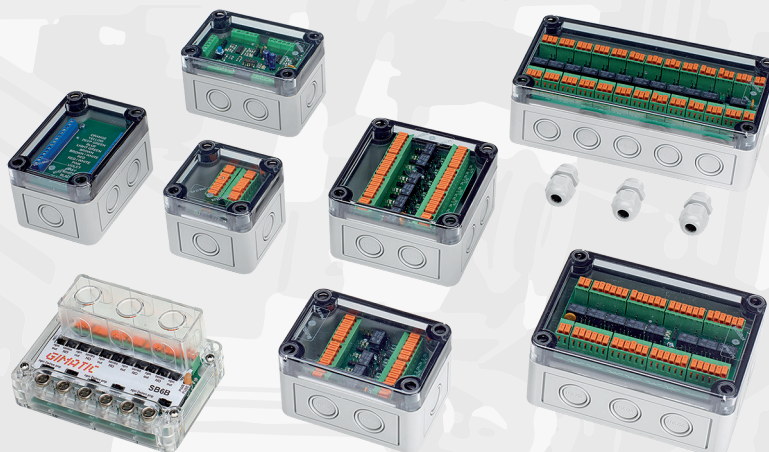

An innovative way to consider the EOAT sensor boxes. The modular sensor box SBM will allow to connect in series from 2 to 20 switches in any configuration (PNP/NPN, NA/NC), getting a single signal to allow EOAT operations.

The manifold consists of single slave modules, one for each signal and individually configurable, and master modules, as many units as many outputs you require.

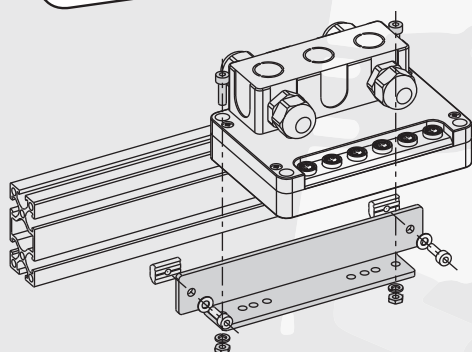

SENSOR BOX RANGE

Our range offers a wide assortment of combinations. Gimatic SENSOR BOX are available with M8 plugs or cable glands, with manual configuration or programmable by a microprocessor that allows

self teaching process. It's completed by several accessories like mounting brackets suitable into your EOAT and a lot of wired connector for a clear and light configuration.
